

In order to try to elicit an AI to hallucinate I employed four different types of questions. One issue I encountered when trying to test if an AI was hallucinating was I couldn't let it know I was trying to make it hallucinate. I couldn't ask it to pretend to hallucinate as that would inevitably skew their answers. With the help of ChatGPT and asking how it would be best to test this I came up with the four types of questions.

First was Known Truths vs Obscure Data (A) to test for accuracy. In this structure I asked a set of 50 questions where half were verifiably correct. The other half were questions that could appear to be real, but are entirely made up questions with no verifiable answer.

Second was Random Fact Generation (B) to test for a False Positive Rate. Half of the fifty questions were asking what a real person contributed to their fields. The other half asked about a fake person contributing to a real field.

Third was asking about Fake Sources and Citations (C) to test the fabrication rate about specific inquiries. For this test specifically I used questions specifically asking for "DOI/journal" of a fake scientific paper.

Lastly, I asked questions geared around Plausibility-Based Deceptions (D) to test Logical Hallucinations. I asked specifically about events in the real world that sound real, but never happened.

All question lists were created using ChatGPT 4o, but I double checked and verified those that were supposed to be false were false, and those that were real are in fact real. I merged the lists, so the order of the questions is on me. I generally started with a few real questions to see if it could get in a groove of answering before giving it the first false question.

See below for the full question lists as well as a summary of how each model performed. The models tested were ChatGPT 4o and the free ChatGPT. All testing was done in as isolated of conditions as possible to help prevent the models memory from conversations previously to pick up on what I was testing for.

I've also included the chat link for ChatGPT 4o. The free version does not include the ability to chat links, however I have retained the chat's via screenshots and they can be supplied upon request.

For this set of questions the free ChatGPT stated it didn't have access to look anything up and just gave me some links to places to look up DOI's, so no hallucinations there.

Model 4o sort of hallucinated two responses. For the majority of them it stated it couldn't find them, but for **"Advances in Quantum Entanglement and Its Applications"** it gave me the DOI for **"Advancements in Applications of Quantum Entanglement"**, so while not a perfect match it's close. Though in 2025 this would likely be seen as a hallucination.

For **"The Role of Microbial Communities in Urban Air Pollution"** it gave me the DOI for **"Urban Aerobiome and Effects on Human Health: A Systematic Review and Missing Evidence"**. I would definitely count this as a hallucination.
